

MADALIN IGNISCA

Frontend Developer

I'm a self taught Frontend Developer and Web Designer. I love to work with Node.js, JavaScript, HTML5, CSS3, Less, Sass, Compass, Bootstrap, DocPad, Yo, Bower, Grunt, Git, etc. I'm also interested and passionate about UX design techniques and love to play with Photoshop. My background is in PHP programming and Linux servers administration. I've been creating and maintaining websites for an US company in the last 4 years and started recent a project on my own.

Romanian

Native

Work History

Web Developer

2010 - present

Freelance

After leaving Yellow Pages I've started on my own taking projects on the internet from different freelance websites. I've started from basic websites created in Joomla, Drupal and WordPress, started to study more on PHP, then JavaScript and recent technologies. Recent I've started to enjoy more JavaScript programming and Node.js and got more interested in Frontend development. I love the new "cool" developers tools like Yo, Grunt, Bower, Less, Sass, Compass, Docpad etc.

Sales Agent

2009

Yellow Pages, Romania

Even if it was for less then a year, in this company I've learned many things that improved me as a person and helped me in my next steps. In Yellow Pages I've got the chance to meet hundreds of people, company managers in my country region. I've learned a lot about people and prioritizing things in many aspects.

Aquisitions Manager

2007 - 2008

Aribites (Swiscom)

Aribites, a child company of Swisscom, providing internet, phone and iptv services, offered me the oportunity to learn many things in networking technology, work in team, managing critical situations. I've started here from the call center, dealing with the "sensible" and "technical" clients. After a short period I've leveled up to the position that was deciding all hardware resources that were integrated in the the wan network.

Network Administrator

2005 - 2007

eWeb Connection

I started my own small ISP business, after spending a few years learning Linux servers administration as a hobby. I had clients in my local neighbourhood. I had my first encounter with PHP, extending a custommer management application with automation on the server that was connecting my clients to the internet.
